BUSINESS INTERRUPTION

When businesses suffer a loss, our goal is to minimize interruption to their operations. We know that every minute a company's doors are closed, the prospect of losing customers and revenue grows.

Disaster Restoration offers creative solutions and round-the-clock availability when water or fire damage occurs at a commercial, industrial and residential site.

MITIGATE YOUR LOSS

Reducing Water Damaged Losses

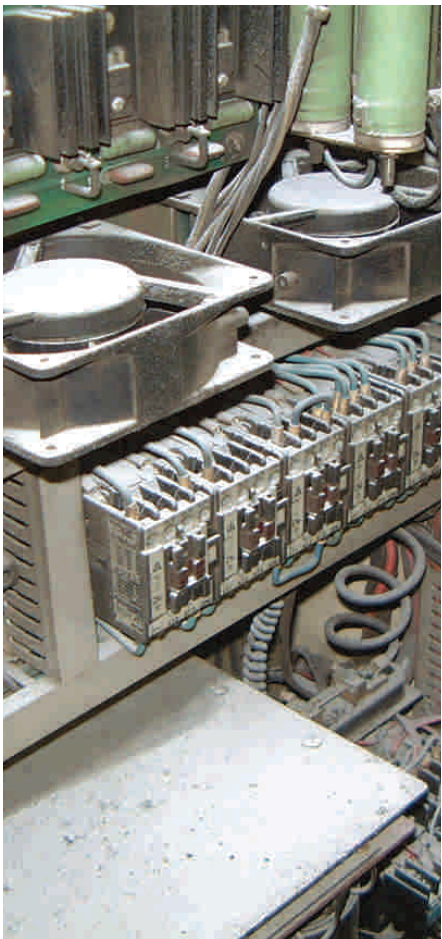

Moisture deterioration occurs after a building is water damaged. Wood swells, buckles or begins to rot, false partition wall and ceiling board loses rigidity and strength, electrical wiring corrodes, metal components rust, paint peels and more. All of these effects can be controlled and restored if fast action is taken. Over the years, we have saved insurers millions of dollars each year following water-damage disasters. You don't require old-fashioned 'rip out and replace' methods of recovery.

Reducing Soot And Fire Damaged Losses

Items located at the seat of a fire usually suffer thermal damage and are beyond economic repair.

Items and equipment away from the seat of the fire suffer mostly surface soot contamination and can be decontaminated and restored.

Whether a single room or an entire complex, a residential, commercial or industrial loss, Disaster Restoration has the knowledge and expertise to ensure stabilisation is conducted properly to prevent further deterioration.

We take all jobs, big or small. We have years of experience providing customized solutions and single source responsibility for all phases of restoration.

"NO CURE-NO PAY"*

Disaster Restoration's Unique Guarantee. We strongly believe that you should not have to pay for things that cannot be restored to pre-loss condition. You have nothing to lose, but everything to gain. * **Condition Apply**

EXPERIENCE COUNTS

Disaster restoration is not a simple clean up. Correctly assessing the type of damage and identifying suitable restoration options requires specialized knowledge and vast experience. Drying, cleaning and decontamination of electronic equipment, computers, mechanical equipment ,furnishings, carpets, upholstery, wooden items, draperies and wall treatments vary widely and require specific responses to be effective.

EMERGENCY RESPONSE

The industry's best-trained project managers and support staffs are on call 24 hours a day, every day to respond to emergencies. Our rapid response helps guarantee the insurance policy mandate is fulfilled and that secondary losses are significantly reduced.

The Disaster Restoration emergency vehicle is equipped with the latest restoration equipment, emergency lighting and board up materials. We also maintain the largest inventory of drying and de-flooding equipment in Singapore.

For commercial or industrial losses, all of these resources are critical to minimize business interruption and maintain business continuity.
